# Preventive Maintenance

Proper care will help protect and maintain the appearance and performance of your resilient floor. A care program consists of key areas:

## Preventative Maintenance | Routine Maintenance | Spot and Spill Removal

### Preventative Maintenance:

- 1 Protect floors when moving heavy objects to prevent permanent scratches and tears. The use of plywood and heavy cardboard are examples of protective barriers.
- 2 Use appropriate wide floor protectors under tables, chairs, stadium seating and any other heavy furnishing to avoid permanent damage.
 
- 3 Keep clean walk-off mats that absorb soil and moisture at all entrances. If not properly maintained these can become a source of soil and moisture.

### Routine Maintenance:

Microfiber pads are recommended for dry and wet mopping.

- 1 Removal of dust, hair and soil at each work station is important to maintain a clean work environment and to prevent particles from abrading the surface of resilient floors.
  - a) The work areas require cleaning after each haircut by either sweeping or dry mopping.
  - b) Do not use vacuums with rotating beater bars on hard surfaces.
- 2 Daily wet cleaning after store hours is recommended to help maintain the floor's appearance.

- a) Always dust mop with the microfiber pad for dry mopping before any type of wet cleaning.
 
- b) Shaw's R2x Hard Surfaces Green Formula Flooring Cleaner is recommended for overall cleaning and general spot cleaning. Mix concentrate per instructions on R2x Hard Surface Cleaner label.
- c) Lightly spray mist the floor in a 4' x 4' area and wipe clean with the microfiber pad for wet mopping attached to the mop head. Continue same technique for entire floor. Mist only; do not saturate.
 
- d) Replace pads when soiled. Several pads will be necessary to achieve the best cleaning performance. Soil from the floor will not transfer to the microfiber cloth pad if the pad is saturated with soil.

(Soiled microfiber pads can be washed hundreds of times. When washing or cleaning the microfiber pads, do not use liquid fabric softener or fabric softener sheets.)

### Spot and Spill Removal:

Shaw's flooring products are engineered to resist and minimize common staining.

- 1 Absorb wet spills as quickly as possible by blotting with white paper or cloth towels. Rinse with water if necessary

- 2 Dried spots should be removed by gentle agitation and rinsed with water. Blot dry. Use Shaw's R2x Hard Surface cleaning product for difficult spots.
- 3 Use rubbing alcohol (isopropyl alcohol) with a clean white cloth for oil and grease type spots requiring a solvent type cleaner that water and the R2x spot cleaner cannot remove.
- 4 Do not use cleaning products containing bleach. Please note that some stain conditions may become permanent. Contact Shaw at 877-502-7429 or [www.shawcontractgroup.com/ContactUs](http://www.shawcontractgroup.com/ContactUs) for assistance.

### Safety Caution:

The surfaces of resilient floors change during wet cleaning. Use appropriate safety measures.
